

Objectives

- Streams
- Enumerated types
- Collections

Oct 1, 2008

Sprengle - CS209

1

Review

- What are some ways to categorize streams?
 - When would you use these streams?

Oct 1, 2008

Sprengle - CS209

2

Scanners

- Do not throw `IOExceptions`!
 - For a simple console program, `main()` does not have to deal with or throw `IOExceptions`
 - Required with `BufferedReader / InputStreamReader` combination
- Breaks its input into tokens using a delimiter pattern, which matches whitespace
 - What is "delimiter pattern"?
 - What is "whitespace"?
- Converts resulting tokens into values of different types using `nextXXX()`

Oct 1, 2008

Sprengle - CS209

3

Scanners

- Throws `InputMismatchException` when token does not match pattern for expected type
 - e.g., `nextLong()` called with next token "AAA"
 - `RuntimeException` (no catching required)
- Can change token delimiter from default of whitespace
- Assumes numbers are input as decimal
 - Can specify a different radix
- Scanners are for Java 1.5 and up only

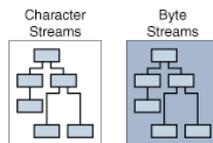

Oct 1, 2008

Sprengle - CS209

4

java.io Classes Overview

- Two types of stream classes
 - Based on datatype: `Character`, `Byte`

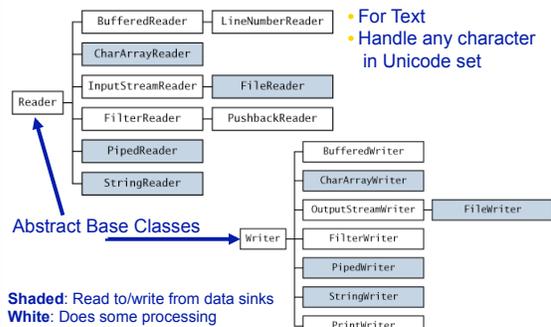

Oct 1, 2008

Sprengle - CS209

5

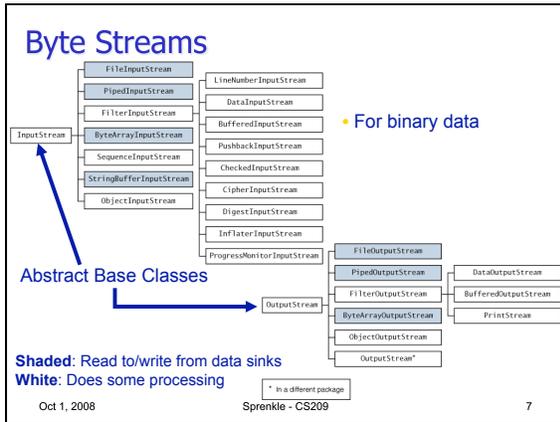

Character Streams

Oct 1, 2008

Sprengle - CS209

6

Readers and Input Streams

Similar APIs for different data types

<p>characters</p> <ul style="list-style-type: none"> • Reader <ul style="list-style-type: none"> ➢ int read() ➢ int read(char cbuf[]) ➢ int read(char cbuf[], int offset, int length) 	<p>bytes</p> <ul style="list-style-type: none"> • InputStream <ul style="list-style-type: none"> ➢ int read() ➢ int read(byte cbuf[]) ➢ int read(byte cbuf[], int offset, int length)
---	---

Writers, OutputStreams are similarly parallel

Oct 1, 2008 Sprenkle - CS209 PetSurvey.java 8

- ### java.nio.*
- Additional classes for I/O
 - Scalable I/O
 - Fast buffered byte and character I/O
 - Character set conversion
 - Designed for performance tuning
- Oct 1, 2008 Sprenkle - CS209 9

- ### Additional I/O Functionality
- Java provides classes so that you can
 - Lock files (java.nio.channels.FileLock)
 - Coordinates accesses to files
 - Multiple programs read/write same file
 - Depends on OS to enforce locks
 - Read from random points in the file
 - java.io.RandomAccessFile
- Oct 1, 2008 Sprenkle - CS209 10

PARSING FILES

Oct 1, 2008 Sprenkle - CS209 11

- ### Parsing Files
- Use programs to automate tasks
 - Often have large amounts of data in files
 - Java provides classes to make parsing easier
- Oct 1, 2008 Sprenkle - CS209 12

Use String class

String[] split(String regex)

\\s means whitespace

```
String test = "this is a test";
String[] result = test.split("\\s");
for (int x=0; x<result.length; x++)
    System.out.println(result[x]);
```

Output: this
is
a
test

We also used "" to
split on a space

13

Regular Expressions in Java

Predefined character classes

Class	Meaning
.	Any character (may or may not match line terminators)
\d	A digit: [0-9]
\D	A non-digit: [^0-9]
\s	A whitespace character: [\t\n\r\b\f]
\S	A non-whitespace character: [^\s]
\w	A word character: [a-zA-Z_0-9]
\W	A non-word character: [^\w]

- Regular expressions are very powerful
- We'll discuss regular expressions more later

Oct 1, 2008

Sprenkle - CS209

14

StreamTokenizer

- Tokenize an incoming character stream
- Table-driven lexical analyzer
 - Every possible input character has a significance
 - Scanner uses the significance of the current character to decide what to do
- Compiler terminology!
- May be useful to parse files
 - E.g., handling comments like /* */ or //

Sprenkle - CS209

15

ENUMERATED TYPES

Oct 1, 2008

Sprenkle - CS209

16

Enumerated Types

- Also called *enums*
 - More powerful than enums in C
 - New to Java 1.5
- Are like **inner** classes in Java
 - Entirely nested within another class
- Implicitly inherits from `java.lang.Enum`
- Example:

```
enum Season { Spring, Summer, Fall, Winter };
Season now = Season.Fall;
```

Oct 1, 2008

Sprenkle - CS209

17

Enums

- Has static `values()` method
 - Returns array of values in order declared
 - E.g., Spring, Summer, Fall, Winter
- Can add functionality to enum
 - Add methods
- Can be used in `switch` statements

`cards.Card.java`

Sprenkle - CS209

18

COLLECTIONS

Oct 1, 2008

Sprenkle - CS209

19

Collections

- Also known as *Containers*
- Group multiple elements into a single unit
- Store, retrieve, manipulate, and communicate aggregate data
- Represent data items that form a natural group
 - Poker hand (a collection of cards)
 - Mail folder (a collection of letters)
 - Telephone directory (a mapping of names to phone numbers).
- Examples: HashMaps, Sets, Vector

Oct 1, 2008

Sprenkle - CS209

20

Collections Framework

- Unified architecture for representing and manipulating collections
- More than arrays
 - More flexible, functionality, dynamic sizing
- `java.util`

Oct 1, 2008

Sprenkle - CS209

21

Collections Framework

- **Interfaces**
 - Abstract data types that represent collections
 - Collections can be manipulated *independently* of implementation
- **Implementations**
 - Concrete implementations of the collection interfaces
 - Reusable data structures
- **Algorithms**
 - Methods perform useful computations on collections, e.g., searching and sorting
 - Polymorphic: same method can be used on many different implementations of collection interface
 - Reusable functionality

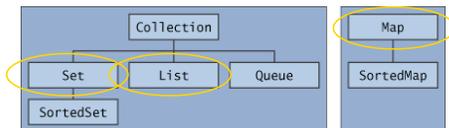

Oct 1, 2008

Sprenkle - CS209

22

Core Collection Interfaces

- Encapsulate different types of collections

Oct 1, 2008

Sprenkle - CS209

23

Generic Collection Interfaces

- Added to 1.5
- Declaration of the Collection interface:

```
public interface Collection<E>...
```

 - `<E>` means interface is generic for element class
- When declare Collection, **specify type** of object contained
 - Make sure put in, get out appropriate type
 - Allows compiler to verify that object's *type* is correct
 - Reduces errors at runtime
- Example, a hand of cards

```
List<Card> hand = new List<Card>();
```

Oct 1, 2008

Sprenkle - CS209

24

Comparable Interface

- Also uses Generics

```
public interface Comparable<T>
    int compareTo(T o)
```

The type it compares

Oct 1, 2008

Sprenkle - CS209

25

Implementation vs. Interface

- Implementation choice affects only performance
- Preferred Style:
 - Choose an implementation
 - Assign collection to variable of corresponding **interface** type or pass collection to method expecting argument of interface type
- Why?
 - Program does not depend on methods in a given implementation
 - Programmer can change implementations
 - Performance concerns or behavioral details

Oct 1, 2008

Sprenkle - CS209

26

List Interface

- An ordered collection of elements
- Can contain duplicate elements
- Has control over where objects are stored in the list
- **boolean** add(<E> o)
 - Boolean so that List can refuse some elements
 - e.g., refuse adding `null` elements
- <E> get(int index)
 - Returns element at the position index
- **int** size()
 - Returns the number of elements in the list
- And more! (contains, remove, toArray, ...)

Oct 1, 2008

Sprenkle - CS209

27

Differences from Python

- No shorthand
 - `list[pos]`

Oct 1, 2008

Sprenkle - CS209

28

List Implementations

- **ArrayList**
 - Resizable array
 - Used most frequently
 - Fast
- **LinkedList**
 - Use if adding elements to beginning of list
 - Use if often delete from middle of list

`cards.Deck.java`
