

## Objectives

- Reviewing the semester
- Picasso demo, discussion
- Reminder: course evaluations due Sunday ~2 p.m.

Dec 11, 2009

Sprenkle - CS209

1

## ASSIGNMENT 11 DISCUSSION

Dec 11, 2009

Sprenkle - CS209

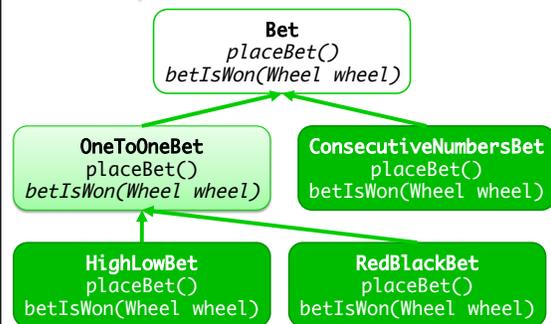

2

## Review: Game class

```
private String placeBet(int whichBet) {
    String result = "";

    if (whichBet == 0) {
        Set<String> choices = new TreeSet<String>();
        choices.add(Wheel.BLACK);
        choices.add(Wheel.RED);
        result = ConsoleReader.promptOneOf("Please bet",
            choices);
    } else if (whichBet == 1) {
        Set<String> choices = new TreeSet<String>();
        choices.add("even");
        choices.add("odd");
        result = ConsoleReader.promptOneOf("Please bet",
            choices);
    } else if (whichBet == 2) {
        ...
    }
    System.out.println();
    return result;
}
```

## Hierarchy of Bets

Dec 11, 2009

Sprenkle - CS209

4

## Effect on Game Class

Greatly reduces amount  
of code in Game

```
private Bet[] myPossibleBets = {
    new OneToOneBet("1 to 1"),
    new ConsecutiveNumbersBet("1-2-3-4-5-6-7-8-9-10-11-12"),
    new HighLowBet("High/Low"),
    new RedBlackBet("Red/Black")
};

public void playRound() {
    int whichBet = promptForBet();
    Bet betMade = myPossibleBets[whichBet];
    betMade.placeBet();

    spinWheel();

    if (betMade.betIsWon(myWheel)) {
        amount *= myPossibleBets[whichBet].getOdds();
    } else {
        amount *= -1;
    }

    player.updateBankroll(amount);
}
```

5

## A Look at the Bet classes

```
public abstract class OneToOneBet extends Bet {
    protected Set<String> choices = new TreeSet<String>();

    public OneToOneBet(String description) {
        super(description, 1);
    }

    @Override
    public void placeBet() {
        userChoice = ConsoleReader.promptOneOf("Please bet",
            choices);
    }
}
```

Dec 11, 2009

Sprenkle - CS209

6

## A Look at the Bet classes

```
public HighLowBet() {
    super("High or Low");
    choices.add(HIGH);
    choices.add(LOW);
}

@Override
public boolean betIsWon(Wheel wheel) {
    if (wheel.onGreen()) {
        return false;
    }

    int wheelNumber = wheel.getNumber();

    return (wheelNumber > SEP && userChoice.equals(HIGH))
        || (wheelNumber <= SEP && userChoice.equals(LOW));
}
```

7

## A Look at the Bet classes

```
public class ConsecutiveBet extends Bet {
    private int numConsecutive;

    public ConsecutiveBet(int numConsecutive, int odds) {
        super(numConsecutive + " in a row", odds);
        this.numConsecutive = numConsecutive;
    }

    public ConsecutiveBet(int odds) {
        this(1, odds);
    }

    public void placeBet() {
        userChoice = ""
        + ConsoleReader.promptRange("Enter first of " + numConsecutive
        + " consecutive numbers", 1, 34);
    }

    public boolean betIsWon(Wheel wheel) {
        int start = Integer.parseInt(userChoice);
        return (start <= wheel.getNumber() && wheel.getNumber() <
        start + this.numConsecutive);
    }
}
```

## Effect on Game Class

Greatly reduces amount  
of code in Game

```
private Bet[] myPossibleBets = {
    new HighLowBet(),
    new ConsecutiveBet(1, 1),
    new ConsecutiveBet(2, 1),
    new ConsecutiveBet(3, 1),
    new ConsecutiveBet(4, 1),
    new ConsecutiveBet(5, 1),
    new ConsecutiveBet(6, 1),
    new ConsecutiveBet(7, 1),
    new ConsecutiveBet(8, 1),
    new ConsecutiveBet(9, 1),
    new ConsecutiveBet(10, 1),
    new ConsecutiveBet(11, 1),
    new ConsecutiveBet(12, 1),
    new ConsecutiveBet(13, 1),
    new ConsecutiveBet(14, 1),
    new ConsecutiveBet(15, 1),
    new ConsecutiveBet(16, 1),
    new ConsecutiveBet(17, 1),
    new ConsecutiveBet(18, 1),
    new ConsecutiveBet(19, 1),
    new ConsecutiveBet(20, 1),
    new ConsecutiveBet(21, 1),
    new ConsecutiveBet(22, 1),
    new ConsecutiveBet(23, 1),
    new ConsecutiveBet(24, 1),
    new ConsecutiveBet(25, 1),
    new ConsecutiveBet(26, 1),
    new ConsecutiveBet(27, 1),
    new ConsecutiveBet(28, 1),
    new ConsecutiveBet(29, 1),
    new ConsecutiveBet(30, 1),
    new ConsecutiveBet(31, 1),
    new ConsecutiveBet(32, 1),
    new ConsecutiveBet(33, 1),
    new ConsecutiveBet(34, 1),
};

public void playRound() {
    int whichBet = promptForBet();
    Bet betMade = myPossibleBets[whichBet];
    betMade.placeBet();
    spinWheel();

    if (betMade.betIsWon(myWheel)) {
        amount *= myPossibleBets[whichBet].getOdds();
    } else {
        amount *= -1;
    }

    player.updateBankroll(amount);
}
```

## Discussion

- Benefits of the refactored hierarchy
- Drawbacks of the refactored hierarchy

Dec 11, 2009

Sprenkle - CS209

10

## Benefits of The Refactored Hierarchy

- Benefits of the refactored hierarchy
  - Where is the logic about the bets?
    - In the Bet classes
    - Game can manage the game, not be responsible for bets
  - Easier to add a new Bet
- Drawbacks of the refactored hierarchy
  - Adds more classes, hierarchy, abstraction

## Project Notes

- Project Analysis: Make sure you understand the others' design/code/parts
  - At least at a high level

Dec 11, 2009 Sprenkle - CS209 15

## PICASSO DEMO

Dec 11, 2009 Sprenkle - CS209 16

## Extensions Discussion

- What would you need to do to create random expressions?

Dec 11, 2009 Sprenkle - CS209 17

## Picasso Demo

- Let's see this baby in action!
- Discuss any design issues/challenges you've met so far
  - Interesting discussions/conclusions
  - How you'd change if you were to do something similar later

Dec 11, 2009 Sprenkle - CS209 18

## Picasso Metrics

Metric	Number
Lines of Code	3327
Methods	318
Classes	138
Packages	13
