

Objectives

- Picasso Design
 - Finish parsing commands
- Collaborating with Subversion
- Discussion of Preparation Analyses

Dec 2, 2009

Sprenkle - CS209

1

Review

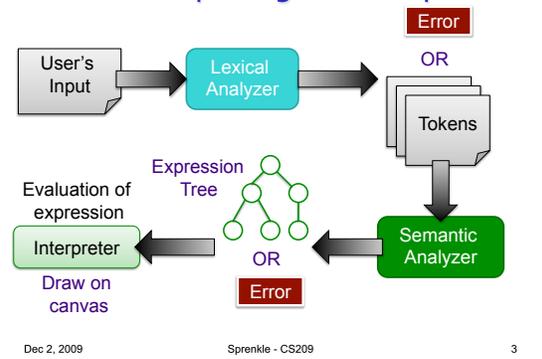

- How is a programming language processed?
 - What are the different phases?
- Start up Eclipse

Dec 2, 2009

Sprenkle - CS209

2

Review: Interpreting User's Input

Practice Adding Functions

1. Create a **token** for the sine function
 - Same prefix as new function, e.g., `SinToken.java`
 - `sin` needs to be added to `functions.conf`
2. Create a **semantic analyzer** for the function with same prefix as function, e.g., `SinAnalyzer.java`
 - Implements `SemanticAnalyzerInterface`, `generateExpressionTree` returns an instance of `ExpressionTreeNode`
3. Create an `ExpressionTreeNode` for function `Sine.java`
 - How should the "evaluate" method be implemented?

Dec 2, 2009

Sprenkle - CS209

4

Expanding Expressions

- How would you handle `perlinColor(expr, expr)` ?
- How would you handle addition?

Goal: easily updated,
extendible code

Dec 2, 2009

Sprenkle - CS209

5

VERSION CONTROL

Dec 2, 2009

Sprenkle - CS209

6

Problems in Collaborating on Code

- Different parts (e.g., user interface and backend)
- > 1 developer implementing concurrently
 - *What if one introduces a bug?*

Creating many prototypes
- What if don't like recent prototype?
Need to go back to older version

Dec 2, 2009 Sprenkle - CS209 7

Version Control Features

- Backup and Restore
 - Files are saved as they are edited
 - Revert to a specific version/checkpoint
- Synchronization
 - Lets people share files
 - Stay up-to-date with the latest version
- Track changes to code
 - Save comments explaining why change happened
 - Stored in the VCS, not the file
 - Track how, why a file evolves over time
- Track Ownership
 - Tags every change with the name of the person who made it

Dec 2, 2009 Sprenkle - CS209 8

Version Control Features

- Short-term undo
 - Messed up a file? Go back to the last good version
- Long-term undo
 - Created a bug a year ago? Jump back to see change you made.
- Sandboxing
 - Making a big change? Make temporary changes in isolated area, test, work out kinks before "checking in" your changes
- Branching and merging
 - Branch a copy of your code into a separate area, modify it in isolation (tracking changes separately)
 - Later, merge work into common area

Dec 2, 2009 Sprenkle - CS209 9

CVS and Subversion

- Popular Version Control Systems
- Subversion is newer, more flexible
- Terms used are common for most version control systems

Dec 2, 2009 Sprenkle - CS209 10

Using Version Control

- Example uses **Subversion**
 - Similar to CVS
- Have own copy of code → "Working Copy"
- Checkout, commit, update code
- Keeps public copy of code: versions of all files, comments about changes, who made changes

Dec 2, 2009 Sprenkle - CS209 11

Using Version Control: checkout

- To start, need to **checkout** your working copy of the code

Dec 2, 2009 Sprenkle - CS209 12

Using Version Control: **commit**

- After you make changes that you *want others to see*, **commit** your version
 - Include comments about what changes you made and why

```

    graph LR
        Person((Person)) -- commit --> Repository[(Repository)]
        Repository -- "comments?" --> Person
        Person -- "comments" --> Repository
        Repository --> Code[(Code)]
    
```

- Checks for conflicts
- Updates each modified file
- Records comments with updated files

Dec 2, 2009 Sprenkle - CS209 13

Using Version Control: **commit**

- After you make changes that you *want others to see*, **commit** your version
 - Include comments about what changes you made and why

```

    graph LR
        Person((Person)) -- commit --> Repository[(Repository)]
        Repository -- "comments?" --> Person
        Person -- "comments" --> Repository
        Repository --> Code1[(Code)]
        Code2[Code]
        style Code2 fill:#ffff00
    
```

- Checks for conflicts
- Updates each modified file
- Records comments with updated files

Other people's code doesn't change

Dec 2, 2009 Sprenkle - CS209

Using Version Control: **commit**

- After you make changes that you *want others to see*, **commit** your version

```

    graph LR
        Person((Person)) -- commit --> Repository[(Repository)]
        Repository -- "conflicts" --> Person
        Person --> CodeStar[Code*]
    
```

- Checks for conflicts -- code conflicts with recent changes in the public copy
- Update code, fix conflicts
- Try commit again

Dec 2, 2009 Sprenkle - CS209 15

Using Version Control: **update**

- To see the *current* version of the code, **update** your repository
 - Resolve conflicts

```

    graph LR
        Person((Person)) -- update --> Repository[(Repository)]
        Repository -- "code" --> Person
        Person --> Code[(Code)]
    
```

Dec 2, 2009 Sprenkle - CS209 16

Using Version Control: **add, delete**

- You need to **add** and **delete** files and directories to the repository, then **commit**

```

    graph LR
        Person((Person)) -- commit --> Repository[(Repository)]
        Repository --> Code[(Code)]
    
```

- Create new records for added files
- Close records for deleted files
- Files not deleted from repository
- Add, delete files and directories
- Commit

Dec 2, 2009 Sprenkle - CS209 17

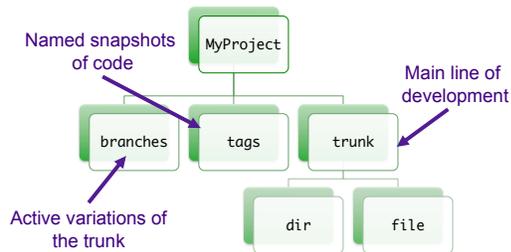

Version Control Advice

- Does not eliminate need for communication
 - Process becomes much more difficult if developers do not communicate
- Before picking up again, **update** your working copy
- Commit** only after you've tested code and you're fairly sure it works
 - Write descriptive comments so your team members know what you did and why

Dec 2, 2009 Sprenkle - CS209 18

Code Organization

- Organize code into appropriate structure

Dec 2, 2009

Sprenkle - CS209

19

SUBCLIPSE

Dec 2, 2009

Sprenkle - CS209

20

Subclipse

- Plugin for Eclipse
- Installation:
 - Help → Install New Software
 - Create remote site:
 - Name: Subclipse
 - http://subclipse.tigris.org/update_1.6.x
 - Select all those packages

Dec 2, 2009

Sprenkle - CS209

21

Checking Out Code in Eclipse

- Create a new SVN Repository:
 - File → New → Other → SVN
 - Repository:
 - `file:///home/courses/cs209/shared/svn/Picasso/trunk`
 - If you want to connect from your home computer:
 - `svn+ssh://knuth.cs.wlu.edu/home/courses/cs209/shared/svn/Picasso/trunk`
- Checkout from repository
 - As a new project (Wizard)
 - Java project, named Picasso

Dec 2, 2009

Sprenkle - CS209

22

Checking Out Code in Eclipse

- If many compiler errors in `src/tests`, may need to add JUnit to classpath
 - Configure Build Path
 - Libraries, Add Library
 - JUnit 4

Dec 2, 2009

Sprenkle - CS209

23

Practice with Subclipse

- Named: your name
- Put some text into it
- Add the file to the Repository:
 - Right-click on the file you created → Team → Add
- Commit your file (*Save for group to see*)
 - Right-click on top-level directory/project → Team → Commit
 - Add an appropriate comment
- Update your repository (*Get latest working version*)
 - Right-click on top-level directory/project → Team → Update
 - Do you have any one else's files?

Dec 2, 2009

Sprenkle - CS209

24

PLANNING THE PROJECT

Dec 2, 2009

Sprenkle - CS209

25

What Steps Need To Be Completed?

Dec 2, 2009

Sprenkle - CS209

26

What Steps Need to be Completed?

- GUI
 - Command interface
 - More options/buttons (optional)
 - Listeners
 - Improve GUI
- **TESTING!**
- Parsing Picasso language
 - Handle functions, arithmetic operators
 - Handling **image** functions
 - Handling assignment statements
 - **Handle errors** appropriately
- Evaluating expressions

Dec 2, 2009

Sprenkle - CS209

27

Dependencies

Dec 2, 2009

Sprenkle - CS209

28

Dependencies

- Parsing classes (tokens, analyzer, expression) are very dependent on each other
- Need to hook GUI to Parser
- Can test without other pieces but easier and more satisfying to see results displayed

Dec 2, 2009

Sprenkle - CS209

29

Effect of Extensions

- Extensions could affect your code design
 - Where could change --> abstraction
- Decision?
 - May change your minds after start working on the code
 - Top vote getters

Dec 2, 2009

Sprenkle - CS209

30

Plan

- Tasks/Steps
 - Testing
 - Think about iterative development
 - Monday deadline: basic functionality of all parts
- Division of tasks
 - # of people per part
- Deadlines

Dec 2, 2009

Sprenkle - CS209

31

Goals

- Implement a version of application
 - Iterative development
- Don't go too far in depth, more breadth
 - See design issues sooner
 - "We need method/functionality X in class Y"

Dec 2, 2009

Sprenkle - CS209

32

Secondary Goals

- You're going to figure out that your design isn't perfect--maybe not even good!
 - Could be partially fault of given code
 - Fix smaller things
 - Refactoring!
 - Note larger things (analysis/post-mortem due at end of finals week)

Good judgment comes from experience.
How do you get experience?
Bad judgment works every time.

Dec 2, 2009

Sprenkle - CS209

33

Picasso Timeline

- Monday, Dec 7: demo application (group)

What should be the goal for Monday?
- ??: final implementation due (group)
- Fri, Dec 18: "Post-mortem" (individual)

Dec 2, 2009

Sprenkle - CS209

34

Friday: Guest Speaker Emily Hill

- On Sakai forum for class, answer the following questions about the talk (also on the forum):
 - What is the main problem she is trying to solve?
 - What is her approach(es) to the problem?
 - How did she evaluate her approach(es)?
 - Are there any limitations to her approach? (i.e., will her approach always work?)
 - Do you have any ideas for future work, e.g., how to extend her approach or what other questions you'd like to know the answers to?
 - What did you find most interesting about the work?
 - How did the talk/research relate to the class, if at all?
- Due on Monday

Dec 2, 2009
