

## Objectives

- Metrics
  - Metrics plugin
- Refactoring for Extensibility

Nov 4, 2009

Sprenkle - CS209

1

## Review

- What property are we designing to?
- What is the typical fix for designing more flexible/maintainable code?
  - What is a limitation of that?

Nov 4, 2009

Sprenkle - CS209

2

## Notes on Assignment 10

- No “right” answer
  - Many design decisions
  - Want you to defend your design decision in code critique

Nov 4, 2009

Sprenkle - CS209

3

## Summary of Designing for Change

Use **abstraction** for code that is  
*likely to change*

- Can depend on code that is *stable* and unlikely to change
  - Example of stable code: `System.out`

Nov 4, 2009

Sprenkle - CS209

4

## METRICS

Nov 4, 2009

Sprenkle - CS209

5

## Metrics to Measure Software Quality

- Create metrics to help us figure out if our code is good and what we can improve
  - Add a little more “science”
- Examples: number of methods, # loc / method, # attributes/class
- Tricky: Not clear what is “good” number
  - Requires good judgment, experience
  - Metrics often should not be considered in isolation

Nov 4, 2009

Sprenkle - CS209

6

## Example Metrics

Metric	Description
<b>Afferent Coupling (Ca)</b>	Number of classes outside package that depend upon classes within package
<b>Efferent Coupling (Ce)</b>	Number of classes inside package that depend on classes outside package
<b>Instability (I)</b>	$Ce / (Ca + Ce) \rightarrow \text{range } [0,1]$
<b>Abstractness (A)</b>	Number of abstract classes divided by total number of classes in a package. 0 → concrete, 1 → abstract

Instability: How does this metric measure instability?  
What does a 0 or 1 mean?

## Main Sequence: Supports OCP

Nov 4, 2009

Sprenkle - CS209

[Martin 1994] 8

## Example: Lack of Cohesion of Methods (LCOM)

- A measure of a class's *cohesiveness*
- Calculated with the Henderson-Sellers method:
  - If  $m(A)$  is the number of methods accessing an attribute A, calculate the average of  $m(A)$  for all attributes, subtract the number of methods  $m$  and divide the result by  $(1-m)$

$$LCOM = \frac{\overline{m(A)} - \# \text{ of methods}}{1 - \# \text{ of methods}}$$

Nov 4, 2009

Sprenkle - CS209

9

## Analysis and Discussion:

What does LCOM tell us?

$$LCOM = \frac{\overline{m(A)} - \# \text{ of methods}}{1 - \# \text{ of methods}} \quad m(A) \text{ is \# methods accessing attribute A}$$

- What is the relationship between  $m(A)$  and # of methods?
- What are the extremes?
  - Every method accesses every attribute?
  - Every attribute is accessed by one method?

Nov 4, 2009

Sprenkle - CS209

10

## Example: Lack of Cohesion of Methods (LCOM)

- A measure of a class's *cohesiveness*
- Calculated with the Henderson-Sellers method:
  - If  $m(A)$  is the number of methods accessing an attribute A, calculate the average of  $m(A)$  for all attributes, subtract the number of methods  $m$  and divide the result by  $(1-m)$
- Low value → a cohesive class
- Value close to 1 → a lack of cohesion
  - Suggests class might better be split into a number of (child) classes

Nov 4, 2009

Sprenkle - CS209

11

## Metrics Plugin

- Install plugin: Help menu → Software Updates → Find and Install
  - New Remote Site
    - Name: Metrics
    - URL: <http://metrics.sourceforge.net/update>

Nov 4, 2009

Sprenkle - CS209

12

## Metrics Plugin

- Provides information about your classes
  - # of classes
  - # of lines of code per method
  - # of attributes
  - Coupling (afferent, efferent)
  - Instability
  - ...
- <http://metrics.sourceforge.net>

13

## REFACTORING FOR EXTENSIBILITY

Nov 4, 2009

Sprenkle - CS209

14

## Simulating a Roulette Game

- See handout

Nov 4, 2009

Sprenkle - CS209

15

## Get a Solution

- Import Existing Project
  - `/home/courses/cs209/handouts/roulette.tar`

Nov 4, 2009

Sprenkle - CS209

16

## Understanding Code

- Execute the code
  - What is the main driver for this project?
- What are each class's responsibilities?
- What does `test.RouletteTestSuite` do?

Nov 4, 2009

Sprenkle - CS209

17

## Bug in the Code

- Determining if Odd/Even Bet was won is incorrect

Nov 4, 2009

Sprenkle - CS209

18

## Understanding Code

- Focus: how **open** is the code to adding **new** kinds of **bets** and how **closed** it is to **modification**?
  - How many classes know about the `Bet` class?
  - What code would need to be added to `Game` to allow the user to make another kind of bet that paid one to one odds and was based on whether the number spun was high (between 19 and 36) or low (between 1 and 18)?

Nov 4, 2009
