Review: Unix

- What are some components of the UNIX philosophy?
 - How do they align with software development principles?
- How do we find out more information about Unix commands?
- Name some Unix commands and what they do
- How can I execute a command that I executed earlier?
- What are some tricks we can use to make using the command-line easier/more productive?

Pipes

- Typical program

- Pipes: The input of one program is the output of the other

- Syntax: `programA | programB`

The UNIX File Hierarchy

Jan 14, 2022

Sprenkle - CSCI397

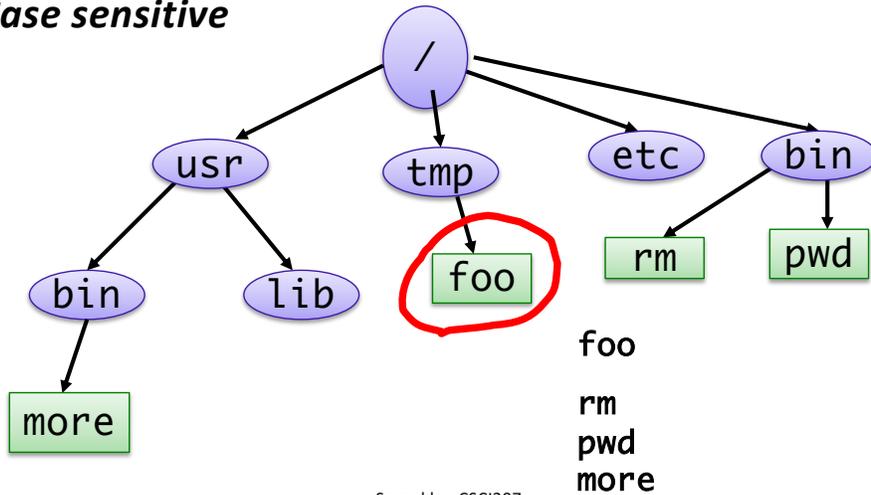

7

7

Definition: Filename

A sequence of characters other than slash

Case sensitive

Jan 14, 2022

Sprenkle - CSCI397

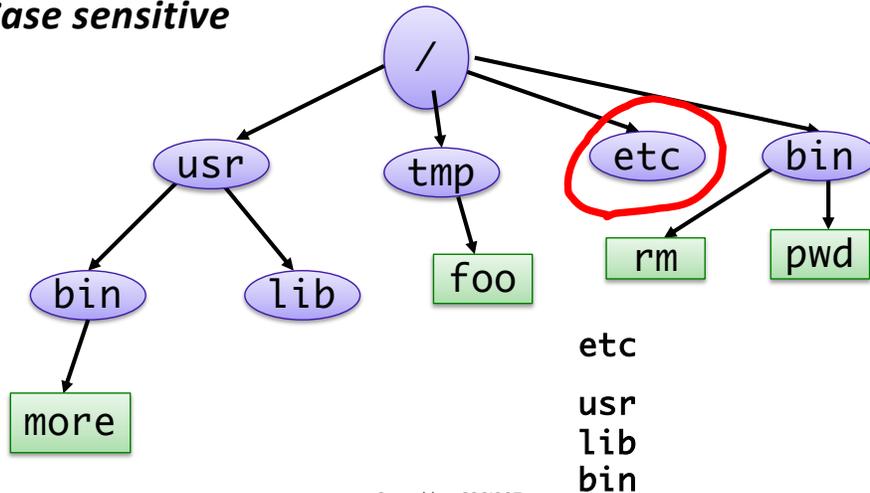

8

8

Definition: Directory

Holds a set of files or other directories

Case sensitive

Jan 14, 2022

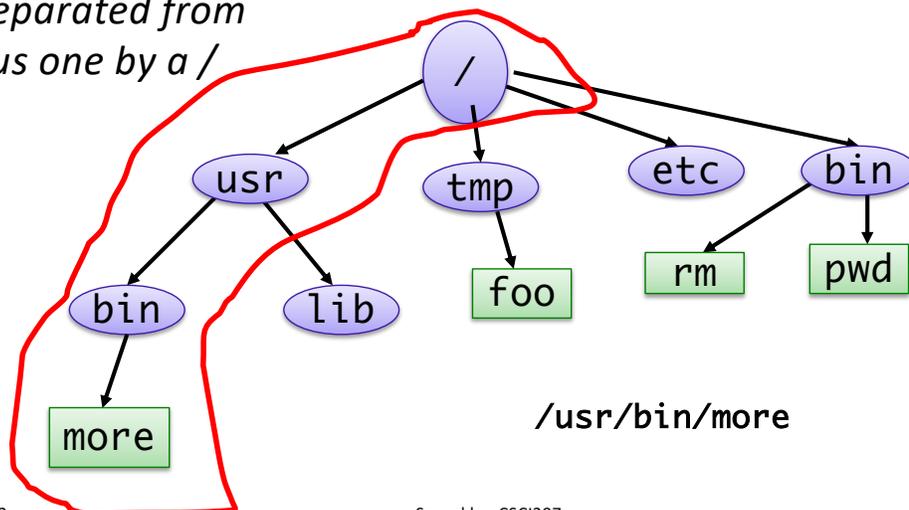

Sprenkle - CSCI397

9

9

Definition: Pathname

A sequence of directory names followed by a simple filename, each separated from previous one by a /

Jan 14, 2022

Sprenkle - CSCI397

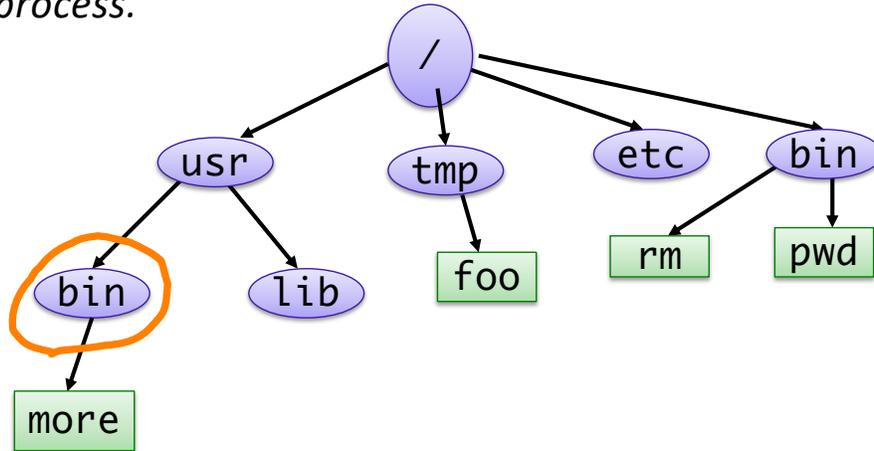

10

10

Definition: Working Directory

Directory the process is currently in.

One per process.

Jan 14, 2022

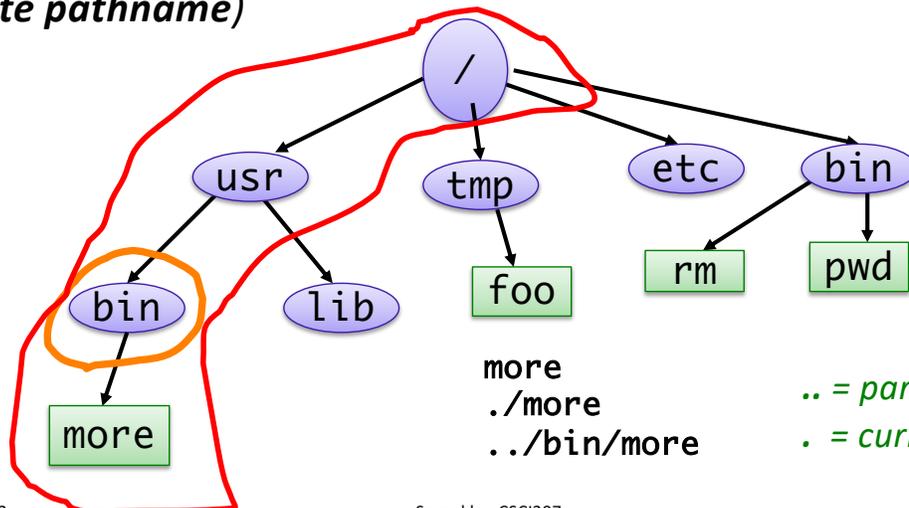

Sprenkle - CSCI397

11

11

Definition: Relative Pathname

A pathname **relative** to the working directory (as opposed to **absolute pathname**)

Jan 14, 2022

Sprenkle - CSCI397

12

12

Files and Directories

- Files are just a sequence of bytes
 - No file types (data vs. executable)
 - Example of UNIX philosophy
- Directories are a list of files and status of the files:
 - Creation date
 - Attributes
 - etc.

13

Directory Management Review

- How do you see a directory's contents?
 - How can you find out more information about the contents?
 - How can you list the content in time order?
- How do you go into a directory?
 - Home directory?
 - Parent directory?
- How can you help avoid a lot of typing and errors when you're trying to go into a directory?

14

Tilde Expansion

- Each user has a *home* directory
- Most shells support `~` operator:
 - `~` expands to my home directory
 - `~/myfile` → `/home/sprenkle@ad.wlu.edu/myfile`
 - `~user` expands to user's home directory
 - `~unixtool/file2` → `/home/unixtool@ad.wlu.edu/file2`
- Useful because home directory locations vary by machine
- HOME environment variable

What is your home directory?

15

15

Directory Management Review

- How do you know what directory you're in?
- How do you make a new directory?
 - How do you make a series of directories, for example `~/cs397/practice/tmp`, in one command?
 - What if `~/cs397/practice/` doesn't exist?
- How do you delete an *empty* directory?

Jan 14, 2022

Sprenkle - CSCI397

16

16

File Management Review

- How do you copy a file?
 - A directory and its contents?
- How do you move/rename a file?
- How do you delete a file?
- How do you delete a directory and all of its content?

Jan 14, 2022

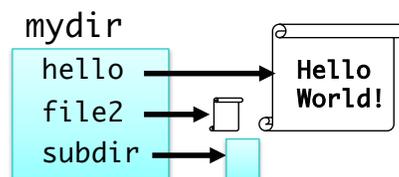

Sprenkle - CSCI397

17

17

Links

- Directories are lists of files and directories
- Each directory entry *links* to a file on the disk

- Links (hard links): Two different directory entries can link to the same file
 - Essentially gives same file another name
 - In same directory or across different directories
 - Cannot make a hard link to a directory

Jan 14, 2022

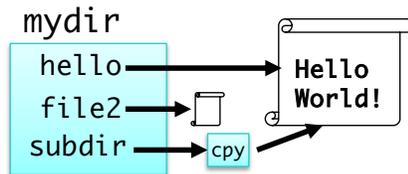

Sprenkle - CSCI397

18

18

Links

- `ln` command: `ln <target> <dest>`

```
ln hello subdir/cpy
```

- Two different directory entries can link to the same file
 - In same directory or across different directories
- FYI: `mv` ing a file does not actually move any data around
 - Creates link in new location
 - Deletes link in old location

19

19

Symbolic links

- **Symbolic** links are different than regular links (often called **hard links**)
 - Created with `ln -s`
- Can be thought of as a directory entry that points to the **name** of another file

Jan 14, 2022

20

20

Symbolic links

- **Symbolic** links are different than regular links (often called **hard links**)
 - Created with `ln -s target dest`
- Can be thought of as a directory entry that points to the **name** of another file
- Does not change link count for file
 - When original deleted, symbolic link remains
- They exist because
 - Hard links don't work across file systems
 - Hard links only work for regular files, not directories

Create a symbolic link to the course's directory
Check if that worked by cding to the link
